# HONEYWELL SOFTWARE ASSURANCE

Like all software, building systems continuously evolve to keep pace with requirements, expectations, regulations, and cyber threats. Delaying upgrades until the end of the lifecycle can feel burdensome, resulting in a possible spike in capital costs.

Honeywell Software Assurance can help you break free of that cycle by keeping critical Honeywell software up to date through a subscription designed to cost-efficiently maintain your building performance.

## KNOW THE RISKS OF DELAY

As essential building software becomes obsolete, your costs and risks can grow from less responsive automation and preventable energy waste to outdated capabilities for control and analytics – and exposure to cyber vulnerabilities.

As a founding member of the ISA Global Cybersecurity Alliance and a leading developer of cybersecurity for operational technologies (OT), Honeywell regularly updates our software to keep your networks and data safe.

Honeywell Software Assurance helps keep your critical Honeywell systems up to date: Enterprise Building Integrator (EBI), Energy Manager, and Digital Video Manager (DVM).

## SUBSCRIBE TO BETTER PERFORMANCE, LOWER COSTS

Honeywell Software Assurance is designed to make updates easier by keeping your Honeywell software current with the latest security upgrades and feature packs.

As a subscription, it can become a more predictable, cost-effective operating expense. Choose the tier that meets your facilities and organizational needs, along with a wide range of additional benefits.

**\$4.45  
MILLION**

Average cost of cyber breaches in 2023\* – many of which begin with a preventable breach of vulnerable operational technology (OT) systems.
