# Addressable Fire Alarm Control Panels

## MS-9050UD, MS-9200UDLS and MS-9600LS/MS-9600UDLS Addressability Within Reach

Fire-Lite Alarms' addressable product offering includes three Fire Alarm control panels that vary in size and capability to meet a wide range of needs, while offering superior value and flexibility. Our addressable product line offers ease of installation and programming, addressable point identification, built-in digital communication, and NAC synchronization. Our super fast LiteSpeed™ protocol ensures that the safety and security of your building and its occupants are always met with the utmost urgency. Fire-Lite's addressable product line sets the benchmark for Fire protection with its innovative, non-proprietary, cost effective products.

Included features on our most popular addressable panels:

- Ability to connect devices via unshielded "fire" wire up to 10,000 feet, allowing for easier retrofits and less install time
- Autoprogram locates and programs the panel for each device and ensures correct addressing and device type
- All electronics mounted on chassis, which can be changed by removing only two nuts, for faster change-outs and easier upgrades
- Notification appliance circuits have built-in synch for the industry's leading manufacturers including System Sensor®, Wheelock® and Gentex®
- Compatibility with Fire-Lite's Internet/Fire Communicators, for communicating alarms over WAN or LAN to the central station

### MS-9050UD

- Single SLC that provides support for 50 addressable devices (any combination of addressable detectors and modules)
- Integrated DACT for off-premises monitoring
- Annunciator bus supports up to 8 devices, including ANN-80 LCD remote annunciator, remote serial or parallel printer gateway, and LED graphic annunciator
- Auto programming feature quickly configures detectors and modules
- Two programmable Class B / A notification appliance circuits (NAC)

### MS-9200UDLS

- Single SLC provides support for 198 addressable devices
- LiteSpeed protocol for SLC communication polls 10 devices at a time and operates on standard, unshielded wire
- Built-in digital communicator for off premises monitoring and remote up/download
- Four programmable Class B / A notification appliance circuits (NAC)
- 3 amp total shared power supply expandable to 6 amps of notification power with optional transformer
- Supports up to 32 optional LCD-80F or ACS LED annunciators

### MS-9600LS/MS-9600UDLS

- Up to 159 detectors and 159 control/monitor modules (total of 318 devices) per SLC (636 with SLC-2LS option card)
- LiteSpeed protocol for SLC communication polls 10 devices at a time and operates on standard, unshielded wire
- Autoprogrammable function reduces installation time
- Advanced Fire Technology includes sensitivity testing and automatic drift compensation
- Four programmable Class B / Two Class A notification appliance circuits (NAC)

## SWIFT® Wireless Devices

SWIFT wireless addressable devices provide secure, reliable communication to the Fire Alarm Control Panel (FACP) across a Class A mesh network. Great for applications where it is costly, obtrusive, or possibly dangerous to use traditional wired devices.

### W-GATE Gateway

Using the SWIFT gateway, the FACP views the SWIFT wireless device as another addressable device on the system providing similar detection functions and outputs as a wired counterpart.

### SWIFT Devices

The SWIFT line offers a variety of device options including photoelectric, photo/thermal, standard and rate of rise heat detectors as well as a relay and monitor module.

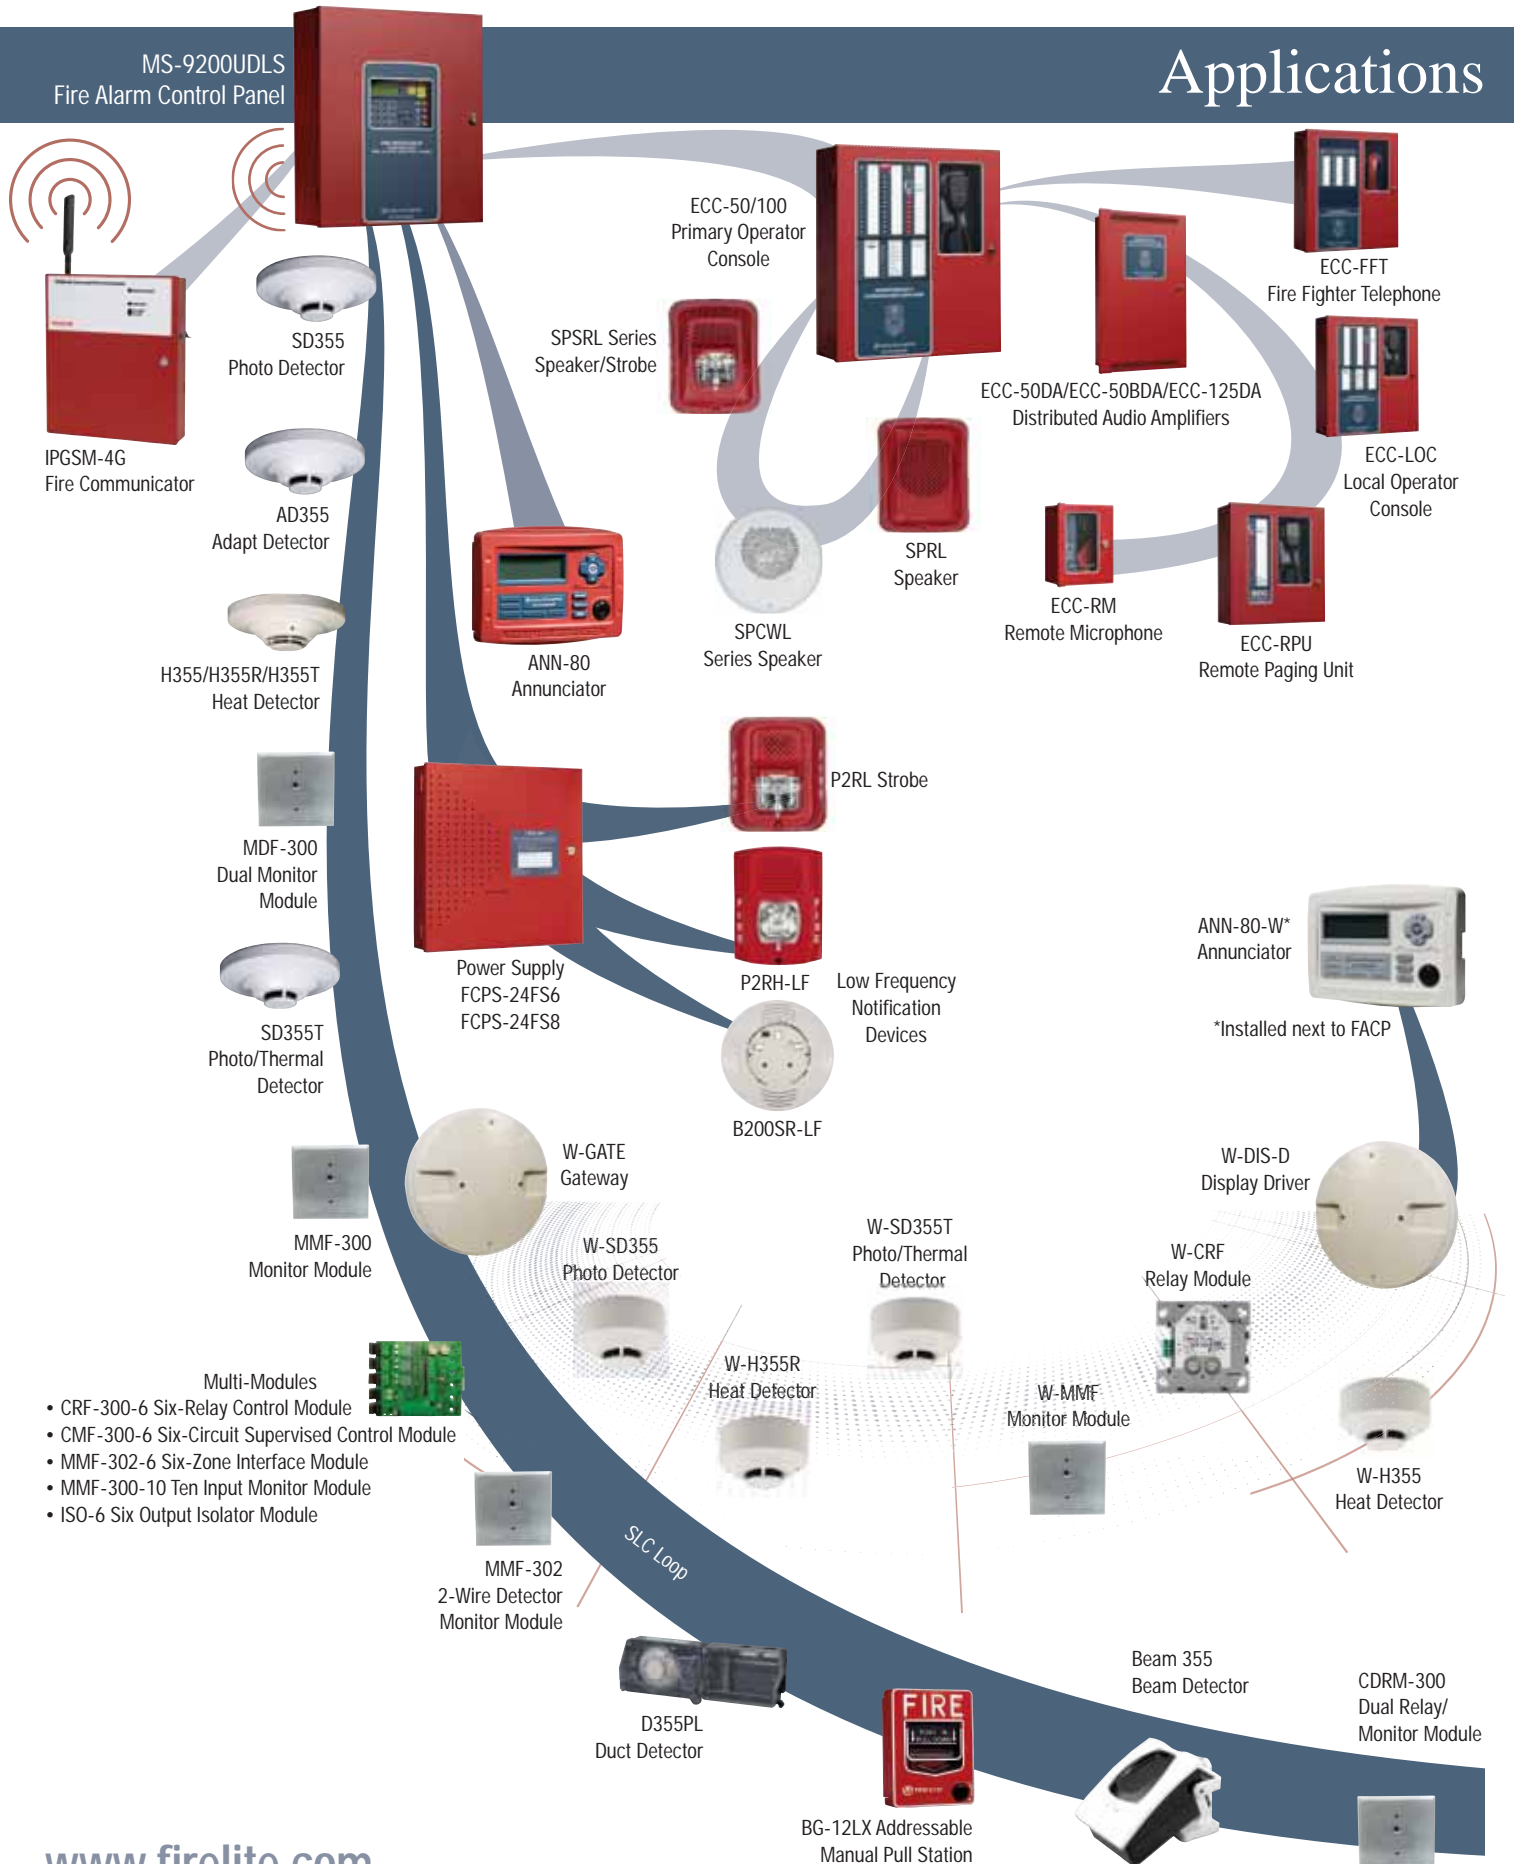

### ANN-80W Annunciator

Fire-Lite fire alarm control panels require W-DIS-D and ANN-80W to display wireless specific messages.

MS-9200UDLS  
Fire Alarm Control Panel

# Applications

# Emergency Voice Evacuation / Mass Notification

Emergency Communications/Mass Notification is about delivering critical messages when they matter most. Our Emergency Command Center (ECC) leverages advanced technology and our 60+ years of life safety dedication and unrestrictive, non-proprietary products. The ECC is ideal for any stand-alone building that needs a flexible, multi-zoned and highly configurable fire evacuation and mass notification system that's easy to install and maintain.

## ECC-50/100

### Primary Operator Console

- Seamless integration and control when connected to select Fire-Lite addressable panels through the ANN/ACS communication bus
- May be used with any UL-listed Fire Alarm control panels. (Messages can be initiated by using a dry contact or via a Fire Alarm NAC circuit)
- Includes a single 25V, 50 watt speaker circuit. (Upgradable to 100 watts and two speaker circuits with optional amplifier)
- Speaker circuits are expandable by up to eight (8) outputs (With an optional ECC-CE6 module)
- Includes 14 pre-recorded messages that are field programmable for up to 60 seconds of message playback
- Built in 2 Amp NAC output with sync generator
- 8 Command Input Circuits that can be used to activate messages 1 to 8
- Optional amplifier can be configured as a backup in the event the primary amplifier fails. Amplifiers are independently powered to eliminate system interruption during a short circuit condition
- Optional transformer conversion module available for 70.7V speaker operation
- Supports charging up to 26AH batteries

## ECC-50DA / ECC-50BDA / ECC-125DA

### Distributed Audio Amplifiers

- Externally mounted amplifiers provide an additional 50 or 125 watts of addressable audio power when connected to the ECC-50/100
- Up to eight distributed amplifiers can be connected to the ECC-50/100 for a total of 1100 watts of audio power
- Includes four built-in speaker circuits which are expandable to eight circuits with an optional ECC-CE4 module (A maximum of 24 audio circuits)
- Speaker output voltage is field configurable on ECC-50DA for either 25 volts or 70.7 volts of operation
- Includes a built-in power supply and backup battery charger
- ECC-50BDA provides 50W of power with 50W as back-up. It can also provide 100W of power (100W primary and 50W of back-up power requires ECC-50WBU)

## ECC-RTZM

### Remote Telephone Zone Module

- Module allows authorized personal access to the system via any telephone
- Remote users have the ability to initiate pre-recorded messages or make live announcements

## ECC-LOC

### Local Operator Console

- Provides a complete control and interface like the ECC-50/100
- Includes built in microphone for ALL CALL paging along with message and zone control
- A maximum of eight ECC-LOCs (or combination of other remote display consoles)

## ECC-RPU

### Remote Page Unit

- Includes built-in microphone for ALL CALL paging along with message control
- A maximum of eight ECC-RPUs (or combination of other remote display consoles)
- Additional 9th button can be used to activate an optional monitor module that can be mounted inside the cabinet for applications such as HVAC shutdown

## ECC-RM

### Remote Microphone

- Includes built-in microphone for ALL CALL paging over available speaker zones
- A maximum of eight ECC-RMs (or combination of other remote display consoles)

## ECC-FFT

### Fire Fighter Telephone

- Provides supervision, annunciation and control for up to 24 remote telephone handsets
- Built-in auto-program feature for quick installation
- Can be wired for class A (Style 6 or Style 7) or class B (Style 4) configuration
- Can be configured for Multi-Phone Jack Audio Circuit supervision
- Allows simultaneous operation of up to 10 firefighter remote handsets

# Conventional Fire Control Panels

Fire-Lite's 24 Volt conventional fire alarm control panels bring the latest in microprocessor technology to conventional fire controls and are easy-to-install, program and operate. With two-zone, four-zone, five-zone and ten-zone configurations, these units offer a variety of options to meet most local, state and national requirements.

## MS-2

- Two initiating zones compatible with 2- and 4-wire smoke detectors, one zone programmable for combo, supervisory and waterflow
- One Notification Appliance Circuit (NAC) with built-in horn/strobe synchronization for System Sensor®, Wheelock® or Gentex® with selectable silence
- 3.0 amps total usable current

## MS-4

- Four initiating zones compatible with 2- and 4-wire smoke detectors, one zone programmable for combo, supervisory and waterflow
- Two NACs with built-in horn/strobe synchronization for System Sensor®, Wheelock® or Gentex® with selectable silence
- Optional module to convert all four initiating zones and two NACs to Class A
- Compatible with System Sensor's smoke detectors, providing "EZ Walk Test" and a Remote Maintenance Signal (panel is offered as i3 Ready, no additional modules needed)
- 3.0 amps total usable current and expandable to 6.0 amps total with optional second transformer
- Options include a plug-in 4XTMF transmitter module, a 4XLMF module to support LED annunciators, and a plug-in 4XZMF zone relay module

## MS-5UD

- Five-zone Style B (Class B) or Five-zone Style D (Class A) with optional module
- Four NAC Circuits Style Y (Class B) or Four NAC Circuits Style Z (Class A) with optional modules
- Built-in NAC synchronization for System Sensor®, Wheelock®, Gentex®, Faraday® and Amseco® devices
- Integral 80 character LCD display with backlighting and keypad
- Annunciator bus supports up to 8 devices, including ANN-80 LCD Remote Annunciator, ANN-S/PG remote serial or parallel printer gateway, ANN-RLY, 10 form C relay board, ANN-LED Zone annunciator and ANN-I/O LED driver board for graphic annunciators
- Built-in two-line digital communicator for off premises monitoring
- Three Form-C programmable relays
- 3.0 amps total usable current

## MS-10UD

- Ten-zone Style B (Class B) or Ten-zone Style D (Class A) with optional module
- Four NAC Circuits Style Y (Class B) or Four NAC Circuits Style Z (Class A) with optional modules
- Built-in NAC synchronization for System Sensor®, Wheelock®, Gentex®, Faraday® and Amseco® devices
- Built in programmer: Integral 80 character LCD display with backlighting and keypad
- Annunciator bus supports up to 8 devices, including ANN-80 LCD Remote Annunciator, ANN-S/PG remote serial or parallel printer gateway, ANN-RLY, 10 form C relay board, ANN-LED Zone annunciator and ANN-I/O LED driver board for graphic annunciators
- Built-in two-line digital communicator for off premises monitoring
- Three Form-C programmable relays
- 7.0 amps total shared power

# Synchronized Power Supplies

Known for dependability, Fire-Lite's power supply family, the FCPS-24FS6 and FCPS-24FS8, are recognized as the benchmark for fire alarm power supplies. Featuring built-in System Sensor®, Wheelock®, and Gentex® strobe synchronization, these UL 9th Edition listed power supplies can be cascaded with strobe timing maintained to meet any installation requirement.

## FCPS-24FS6/FCPS-24FS8

- 24 volt, 6 or 8 amp versions available
- Four Class B (Style Y) Class A (Style Z) outputs
- Built-in Strobe Synchronization for ADA Compliance
- Built-in 18 amp Hour Battery Charger
- Operates as a sync follower or a sync generator (default)

# Releasing Control Panels

Fire-Lite's releasing panels are designed to meet the most demanding conventional releasing applications. With the flexibility and extra high reliability found typically only in advanced systems, the Deluge/Preaction and Agent release models offer a host of features, such as built-in easy-to-use programming templates.

## MRP-2001

### Deluge/Preaction Control Panel

- 6-zone Style B (Class B) or 6-zone Style D (Class A) with optional modules
- 4 Programmable Output Circuits Style Y (Class B)
- Outputs programmable for Releasing Solenoids
- Dual hazard operation
- Adjustable waterflow discharge timer and two soak timers
- Cross-zone capability
- Pre-programmed and custom application templates
- Built-in NAC synchronization for System Sensor®, Wheelock®, Gentex®, Faraday® and Amseco® devices
- Built in programmer
- Annunciator bus supports up to 8 devices, including ANN-80 LCD Remote Annunciator, remote serial or parallel printer gateway, and LED graphic annunciator

## MRP-2002

### Agent Release Control Panel

- 6-zone Style B (Class B) or 6-zone Style D (Class A) with optional modules
- Four Programmable Output Circuits Style Y (Class B)
- Outputs programmable for Releasing Solenoids
- Dual hazard operation
- Adjustable pre-discharge, discharge and waterflow delay timers
- Programmable Abort operation
- Cross-zone capability
- Pre-programmed and custom application templates
- Built-in NAC synchronization for System Sensor®, Wheelock®, Gentex®, Faraday® and Amseco® devices
- Built in programmer
- Annunciator bus supports up to 8 devices, including ANN-80 LCD Remote Annunciator, remote serial or parallel printer gateway, and LED graphic annunciator

## Annunciators

### ANN-80 Series

The ANN-80 is a compact, backlit, 80-character LCD fire annunciator that mimics the Fire Alarm Control Panel (FACP) display. It provides system status indicators for AC Power, Alarm, Trouble, Supervisory, and Alarm Silenced conditions.

### ANN-LED

The ANN-LED annunciator module provides LED annunciation of general system faults and input zones/points when used with a compatible Fire Alarm Control Panel. It provides alarm, trouble and supervisory indication for up to 10 input zones or addressable Points.

### ANN-I/O

The ANN-I/O is an LED driver module that can be used with a Fire Alarm Control Panel to drive most customized graphic annunciators. It comes in a plastic enclosure that may be mounted inside a custom annunciator or accessory cabinet and can drive up to 40 LEDs.

## Pull Stations

**BG-12**  
**BG-12LX**  
**BG-12SP**

### BG-12 Series

The BG-12 Series is a cost-effective, non-coded series of fire alarm pull stations. Available in both conventional and addressable versions, including single and dual actions, with either key lock or hex key, these Lexan® pull stations are typically specified and desired by most architects and engineers.

### BG-8

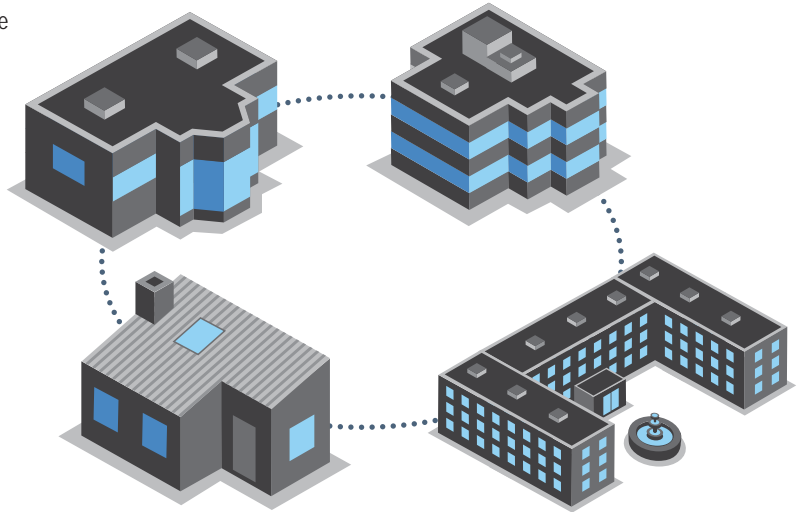

The BG-8 is a conventional, single action metal fire alarm pull station for those jurisdictions where metal pull stations are still required.

# Lite-Connect™ Fiber Solution

Lite-Connect™ is a solution that allows building owners to reduce the number of phone lines by consolidating the central station communications to a single MS-9050UD panel. Using fiber-optic technology, the panels are connected together and the MS-9050UD sends point or zone information for the entire system. In addition, building to building connections with fiber avoid potential ground fault issues and damage caused by lightning strikes.

- Each FACP (main MS-9050UD and remote panels) requires its own ANN-LC module
- Up to 16 remote panels (MS-9050UD and MS-9200UDLS)
- Fiber optic panel to panel connections to avoid potential ground faults or lightning strike issues
- Connects to the ANN-BUS of the fire panel and requires minimal programming
- Class B or Class A operation for survivability

## IP/Cellular Communicators

### Internet Fire Communicator

Designed to work with later-model Contact ID and DACT-equipped Fire-Lite fire panels, the IP Communicator sends information over any type of Ethernet network connection to a central station equipped with a compatible Teldat VisorALARM® IP receiver. The IP Communicator supervises the connection to the central station every 90 seconds, providing faster detection of a connection fault and saves the cost of dedicated redundant phone lines.

### IPGSM-4G

The IPGSM-4G Fire Alarm Communicator represents a leading edge Internet and/or GSM cellular communications solution for monitoring Fire Alarm systems. Its fast, secure and effective alarm communications technology allows the connection to any Contact-ID fire panel and easily installs using Alarmnet. It also saves recurring job-site costs when dedicated phone lines are replaced, making the IPGSM-4G a product that truly pays for itself!

## Telephone Line Communicators

### 411 Series

The 411 Series is a compact, slave and Stand-Alone Digital Alarm Communicator Transmitters (DACTs). DACTs are programmable for a variety of fire, supervisory, trouble, and non-fire applications. The series consists of the 411, 411UD and 411UDAC products. The 411 provides three supervised monitoring inputs/channels, while the 411UD and 411UDAC provide four inputs/channels. The 411 and 411UD are cost-effective solutions for slave applications that require a control panel to transmit system status to an offsite monitoring facility. The 411UDAC can also provide slave communication, however its primary function is a Stand-Alone Communicator. The 411 and the 411UD can be used with the IP Communicator to monitor the alarm trouble and supervisory relays of any competitive fire panel.

# Quick Reference Guide
