# AUTOMATE OUTCOMES THAT BUILD YOUR BRAND

Our goal for hospitality is built on three pillars: To help your hotel find the optimal balance of delightful guest experiences, smarter operations, and energy management that support sustainability goals, whether you operate a single property or a global portfolio.

By pairing our industry-leading automation for guestrooms and buildings with innovative capabilities designed for hospitality, we're committed to helping you achieve outcomes that build your brand.

## ENHANCE GUEST EXPERIENCES

Provide seamless, guest-centered experiences that build loyalty and the bottom line by bringing comfort to guests throughout the property.

Responsive lighting, drapery, and HVAC systems, give guests comfort that's easy to customize with controls and automation that remain out of sight, and out of mind when not needed.

We can also help you make guest stays more than a home away from home by integrating your own blend of personalized services and smart-room capabilities, with data and automation to keep it running smoothly

## SUPPORT SUSTAINABILITY GOALS

Optimize energy use in guestrooms and common areas.

Better manage energy and support environmental, social, and governance (ESG) goals with building systems that adapt automatically to save energy in unoccupied rooms and spaces, while optimizing comfort and air quality when people are present.

Dashboards and reports also track and compare energy use from asset to portfolio level, enabling data-driven decisions for your ESG goals.

These capabilities can fit properties of any type and size, from easy do-it-yourself options that scale up to full smart-building integration.

## OPTIMIZE OPERATIONAL EFFICIENCY

Streamline workflows without staff increases using automation and analytics.

With capabilities and dashboards that are easy to learn for multiple needs, staff can use data-driven coordination to anticipate and respond to guest needs faster – from predictive maintenance and optimized housekeeping assignments to remote monitoring of multiple properties.

You can also expand capabilities and results at any time by integrating additional systems, such as your property management system (PMS) and Internet of Things (IoT) features for hospitality, as well as security, fire safety, and building automation.

# EVERY BUILDING SYSTEM CONNECTS WITH HONEYWELL

## INNCOM GUESTROOM AUTOMATION

From limited-service hotels to full-service resorts, our INNCOM platform has earned a 40-year reputation for energy management while keeping guests comfortable.

The INNCOM platform gives you a modular energy management system (EMS) for guestrooms that's easy to expand so you can scale up as needed:

- **Standalone EMS:** INNCOM EMS thermostats with built-in motion sensors provide occupant detection for energy efficiency that doesn't compromise comfort
- **Advanced EMS:** Door sensors add faster, more precise occupant detection
- **Guestroom IoT:** Integrate the widest selection of third-party hotel technologies – door locks, lighting, drapes and shades, voice control, minibars and more
- **Networked EMS:** PMS integration fully optimizes guestroom energy use

## BUILDING CONTROL & AUTOMATION

Whether you need a building management system (BMS) preconfigured for easy training or one that's fully customizable, we offer the full spectrum of capabilities – and our experts can help you identify the most cost-effective options for your goals.

- Remote management makes it easy to operate, analyze, and benchmark any number of properties
- Unify building systems such as HVAC, fire safety, security video, and access control into an interactive map of your site
- Use real-time sensing and automation to optimize energy use, comfort, and other system-performance metrics throughout the property

## SAFETY & SECURITY

For decades, we've helped buildings of every size and complexity get the capabilities they need to protect people, property, and operations.

- Simplify fire and life safety with cloud-based digital integration for remote alerts and management, and faster maintenance and testing
- Detect fire, smoke, and other hazards earlier
- Improve emergency responses and communications
- Optimize security and video monitoring with AI-based analytics
- Streamline secure access with easy customization for multiple roles
- Reinforce cybersecurity for your building's operational technologies (OT)
