

Product Announcement: New L-Series Drop-In Ceiling Tile Speaker, Strobe and Speaker Strobe

February 2021

System Sensor is pleased to announce the latest offering in our L-Series line of AV notification appliances with the availability of drop-in ceiling tile speakers, strobes and speaker strobes.

These drop-in ceiling tile devices install significantly faster than traditional AV notification appliances and the neutral grill pattern makes them an excellent option for schools, office buildings, retail, restaurants, and hospital applications. They also offer a complete turn-key solution that eliminates the need for a separate back box, extension ring, and suspended ceiling support bracket so installers get a perfect fit the first time and every time. Plus, they're easy to design into projects since they provide the same great performance as the standard L-Series appliances and are both UL 1480 and UL 2043 Listed. Note that speaker strobe and strobe products ship without markings for ECS applications but also include an optional FIRE decal. For additional customization, strobe models also accept our L-Series colored lenses.

These new drop-in ceiling tile devices offer the following benefits over traditional AV notification appliances while also being backwards compatible with all System Sensor SpectrAlert, SpectrAlert Advance, and L-Series notification appliances:

- **Reduced Labor** – Complete more jobs in less time
- **Cleaner Installation** – Less obtrusive appearance
- **Lower Risk** – More accurate project quotes with less variables to manage during installation

The new L-Series drop-in ceiling tile AV notification appliances are available to order now! Contact your preferred System Sensor authorized wholesale distributor for ordering and pricing information and visit systemsensor.com for more information.
