

## Product Announcement: New L-Series Low Frequency Sounder Strobes

November 2020

System Sensor is excited to announce two new additions to our L-Series line of AV notification appliances with the availability of low frequency (520 Hz) ceiling-mounted sounder strobes. Available with red and white housings, L-Series low frequency devices can meet virtually any application requirement and are the most versatile and easy-to-use line of AV notification appliances in the industry.

The low frequency sounder and sounder strobes are designed to address the NFPA 72 sleeping space requirements that require a low frequency notification appliance that operates with a frequency range of 520 Hz  $\pm$  10% and is of a square wave tone.

These low frequency devices provide a consistent look with the previously released L-Series product line while offering the following enhancements over the legacy SpectrAlert® Advance line:

- Up to 40% lower current draw for significant power supply savings
- Unmatched versatility to fit any application by offering:
  - Wall, ceiling and compact models
  - Rotary switch for High and Low, Temp 3 and Temp 4 tone settings
  - Full candela range to optimize current draw
- SWIFT wireless AV base compatibility
- Compatibility with existing SpectrAlert and SpectrAlert Advance notification appliances for retrofit applications

**The L-Series low frequency product line is available to order now!** Contact your preferred Honeywell authorized security equipment distributor for ordering and pricing information and visit [systemsensor.com](http://systemsensor.com) for more information.
