# ALWAYS-ON ANALYTICS FOR ALWAYS-ON ENERGY

For convenience stores that run power-hungry equipment nonstop, like refrigeration, HVAC, and lighting, it might seem like there are few opportunities to save energy on a day-to-day basis.

But now the Honeywell Small and Medium Building Administrator makes it easy to manage your whole portfolio, even with a small centralized team. Monitor energy use, optimize settings, get early maintenance alerts – and reduce energy costs by as much as 30%.<sup>1</sup>

## AN AFFORDABLE WAY TO SAVE

Refrigeration, HVAC, and lighting typically make up as much as 85% of a store's electrical bill, yet most operators have limited data on how efficiently equipment runs or when issues are likely to occur.

But when your always-on stores are connected to a simple digital platform for nonstop analytics, seemingly small insights and alerts can make a big difference in costs.

## POWERED BY HONEYWELL FORGE

The Small and Medium Building Administrator gives you a simple yet reliable way to control energy use, streamline facility operations, and protect your margins – all in an affordable subscription that won't hit budgets with heavy upfront costs.

## NEW CONSTRUCTION & RETROFITS

The system includes options for non-intrusive wireless sensors and hardware, making installation fast and easy with little or no downtime. Connect any building new or old, using any type of equipment.

Smart sensors give you real-time monitoring of equipment and temperatures. And smart-building devices like our commercial thermostat let you control settings such as temperature and lighting from anywhere without heavy upfront costs.

## MADE FOR MULTI-SITE

The platform is cloud-based and modular, making it fast to deploy and configure, easy to use, and simple to upgrade – across 3 stores or 10,000+. Just scale your sites and capabilities as your needs grow.

## ANYONE, ANYWHERE

The interface is designed for any employee to master with minimal training, using a mobile app that's accessible from your computer, tablet, or smartphone.

• **Uninterrupted service:** Keep customers comfortable while food stays fresh

- **Monitoring:** Control and automate equipment and settings at each store, or let our experts monitor and optimize for you
- **Alerts:** Equipment alarms for a variety of issues, such as temperatures out of range
- **Predictive maintenance:** Prevent costly downtime, and schedule service when it's convenient

<sup>1</sup> Results are not necessarily typical and are based on Honeywell "before and after" analysis at selected customer sites. Such analysis compares site performance before deployment of Honeywell solutions to post-deployment performance, without controlling for other factors that may have affected results. Your results may vary.

## ENERGY SAVINGS ARE ONLY THE START

When you can monitor your portfolio in real time, energy savings are just the first step in streamlining operations and reducing costs.

- Respond quickly and remotely to energywaste; e.g. alert an onsite employee to an open door or freezer
- Know when refrigeration temperatures are out of range, and reduce costly loss of perishables with critical alarms
- Troubleshoot remotely to prevent unnecessary service calls or costly after-hours maintenance emergencies
- Manage exterior lighting to ensure customers know when stores are open
- Monitor energy meter usage through the dashboard and compare against history or baseline
