DEPLOY PRO-WATCH INTEGRATED SECURITY SUITE SEAMLESSLY IN MICROSOFT® AZURE™

Honeywell

LEVERAGE YOUR MICROSOFT AZURE SUBSCRIPTION FOR SEAMLESS DEPLOYMENT WITH PRO-WATCH INTEGRATED SECURITY SUITE

Today, many businesses have made the strategic business decision to leverage the advantages of handling their security infrastructure requirements through Microsoft® Azure™, a cloud-based option from Microsoft. These advantages include:

- Significant cost savings in hardware acquisition maintenance and real estate, such as saving on the cost of obtaining hardware servers and the space to accommodate them. Customers pay only for what they need, not IT assets they may only require occasionally while still maintaining access on demand when and where as needed.

- Enhanced security with updates and responsibility for safeguarding data outsourced to cloud providers.

- Pro-Watch® built-in compliance for requirements in finance, healthcare, government and other highly regulated industries.

- Sustained, nonstop maintenance for backup, recovery, and failover.

To maximize these benefits, start by choosing the Pro-Watch Integrated Security Suite – including Pro-Watch 5.5, Intelligent Command 5.5, MaxPro® VMS R700 and NVR 7.0 – to integrate your security-related IT functions. This security platform for enterprise and critical infrastructure entities provides a robust global integrated access control and a video and surveillance detection solution while optimizing productivity, ensuring compliance with industry demands, and reducing operational costs.

You can now seamlessly access all of these Honeywell Integrated Security Suite benefits along with those provided by Microsoft Azure through your subscription. This virtual deployment option means that you **no longer need to maintain and support physical servers** and can **easily scale server**

needs up or down as well as being able to use managed SQL services. This allows you to **harness the power of a Managed SQL Instance** – such as automatic patching, version updates, automated backups and retrieval, and a high degree of ready availability) – to support security operations and reduce or eliminate overhead related to database maintenance and management.

And you can accomplish all of this as you **reduce TCO** (Total Cost of Ownership) by moving appropriate IT functions to a virtual environment.

Contact us for more details and to learn more about the many benefits of our Integrated Security Suite: **Honeywell and Microsoft Azure – a winning team** to leverage an industry-leading competitive advantages for your business.
