

THE FUTURE OF BUILDING CONTROL HAS LEFT THE BUILDING

Take building management to the cloud for
greater simplicity, uptime, and control

Honeywell Remote Building Manager

Honeywell

HONEYWELL REMOTE BUILDING MANAGER

Who says the system that manages your building ought to be installed in your building?

Remote Building Manager is faster to deploy, easier to use, simpler to scale and adapt – and more affordable. And when your building is easier to manage, it's easier to achieve strategic goals such as sustainability and building health.

BUILDING MANAGEMENT MADE EASY

It turns out that a cloud-based building management system (BMS) still gives you the control and automation you expect – but with greater convenience and consistency.

One site or multisite

Manage your building from a wide variety of devices with a visual interface that lets you see conditions, manage scheduling and alarms, and drill down to details about points and equipment.

Improved uptime

Mobile alerts help you respond to alarms faster and make changes remotely. And since the system is always current and maintained, it's more stable too.

Always up to date

You're always running the latest software, which means you'll always have the latest capabilities and data security.

Cybersecure

As a leading developer of cybersecurity for operational technologies in buildings, we incorporate data security and best practices into our software by design.

VISUALIZE YOUR DATA TO SEE RESULTS

The ability to visualize important information about comfort, energy use, and alarms makes it easier to manage a building, both for new users and those with longstanding BMS expertise.

Our intuitive dashboard gives you clear, meaningful graphics of real-time building conditions as well as analysis of trends and the key performance indicators (KPIs) you need for initiatives such as occupant experience, building health, and sustainability.

BUILDING MANAGEMENT MADE AFFORDABLE

Making building control pragmatic means making it cost effective, too.

That's why Remote Building Manager is designed as a subscription service: No site license, no server, and no on-site IT needed to run or maintain it. Just pay for the capabilities you need via your operating budget.

As a cloud-based system, you can add and remove sites and capabilities at any time, starting with the overall level of service you need:

MINI SUBSCRIPTION

- Options to connect to the cloud:
 - A secure gateway application running on an existing Niagara-based BACnet controller
- Up to 1 device / 50 points
- Ideal for small multisite needs: small medical clinics, district heating / cooling, remote boiler-room control, small retail

MIDI SUBSCRIPTION

- Options to connect to the cloud:
 - A secure gateway device communicating to on premise hardware via BACnet
 - A secure gateway application running on an existing Niagara-based BACnet controller
- Up to 50 devices / 2,500 points
- Ideal for single or multisite: Offices, retail, education, civic buildings, healthcare clinics

MAXI SUBSCRIPTION

- Options to connect to the cloud:
 - A secure gateway application running on an existing Niagara-based supervisor
- Up to 50 devices / 5,000 points
- Ideal for single or multisite: hospitals, shopping malls, large commercial

AN ECOSYSTEM OF ADVANCED CAPABILITIES

As part of our broader Honeywell Forge platform for analytics and Internet of Things (IoT) capabilities, Honeywell Remote Building Manager also makes it easy to add and remove other services from the Honeywell Forge ecosystem.

For instance, you can activate modules that add AI-driven optimization for carbon and energy management, space utilization, indoor air quality, building health, and more.

SAME-DAY DEPLOYMENT

With plug-and-play simplicity for Honeywell controllers, integration for third-party systems, and automated mapping to create a digital twin of your building, the system can be installed and configured in just a few hours – rather than multiple days.

ANY TYPE OF BUILDING, LEASED OR OWNED

From new construction to retrofits, deployment is fast and nonintrusive without disrupting operating hours.

- Offices
- Multisite portfolios
- Schools and universities
- Hospitals and clinics
- Hotels and event centers
- Financial centers
- Civic buildings
- Retail and small commercial
