# HONEYWELL SOFTWARE ASSURANCE

Like all software, building systems continuously evolve to keep pace with needs, expectations, regulations, and cyber threats. Delaying upgrades until the end of the lifecycle can feel burdensome, with a possible spike in capital costs.

Honeywell Software Assurance may give you an easy way to break free of that cycle: helping keep critical Honeywell software up to date with a subscription designed to be cost-efficient and assisting your building performance.

## KNOW THE RISKS OF DELAY

As essential building software becomes obsolete, your costs and risks can grow, from less responsive automation, preventable energy waste to outdated options for control and analytics – and exposure to cyber vulnerabilities.

We take your cybersecurity seriously. We're a founding member of the Global Cybersecurity Alliance and a leading developer of cybersecurity for operational technologies (OT). We design all of our software to keep your networks and data safe, including regular updates for the latest protections and best practices.

As a key part of this effort, Honeywell Software Assurance helps make it easier and more cost effective to ensure that your critical Honeywell systems – Enterprise Buildings Integrator, Energy Manager, and Digital Video Manager – stay up to date.

## SUBSCRIBE TO BETTER PERFORMANCE, LOWER COSTS

Honeywell Software Assurance is designed to be a straightforward subscription that helps make it easier to keep your Honeywell software current with the latest feature packs, security upgrades, preferred pricing, and more – helping make it a predictable, cost-effective operating expense.

Choose the tier that meets your needs, and help protect your building's performance with a wide range of benefits.

**\$4.45  
MILLION**

Average cost of cyber breaches in 2023\* – many of which begin with a preventable breach of vulnerable operational technology (OT) systems.
