Honeywell Forge Integrated
Operations for Buildings

Honeywell

Be two places at once. Analyze the past to anticipate the future. And take control from across the country.

For as long as there have been cities, our buildings have expressed who we are and shaped what we can achieve. Yet today, technology is redefining our world, and transforming our buildings into something different – something more than a “place.”

We see a building that responds to the world around it.

A building that helps identify its own energy savings. One that can alert you to risks before they become threats, and can help people stay safer by providing healthier environments.

From an HVAC system that automatically cleans the air, to smarter energy management, life safety, and surveillance systems, we look at your building and we see what it is capable of – because at Honeywell, we understand what your business needs it to do.

And today, we'd like to show you how it works.

Connectivity is driving growth and innovation

Every year, your building comes more to life. Devices connect more data. Systems connect more devices. And the Internet of Things brings it all together. Today, smart buildings are real – and soon, they will be common.

For those watching at curbside, the pace of change can seem incredible. Yet integration is driving creativity throughout your industry – and by strategically integrating building operations, connectivity can also help fuel the growth of your enterprise while proactively safeguarding people and assets.

Now integration can transform your operations

Technology and IoT are reshaping businesses and industries: Knowledge spreads faster, analysis goes deeper. Opportunities evolve rapidly.

These same forces can help you optimize the way your building operates – and position your enterprise to thrive.

The connected building rests on three pillars of industrial IoT: Widespread connectivity, interoperable systems and data, and automated workflows.

From this foundation, we help you identify unique opportunities to connect your people and operations – using strategic automation, coordination, and safety monitoring to support the outcomes your enterprise needs.

Let's revolutionize the way buildings work

Today, your building is capable of more. It is filled with data about the things that happen at your site. Integrated into one intelligent platform, your building can help you operate with greater insight, efficiency, and responsiveness, while also maintaining environments that are measurably healthier and safer to use.

Transform your data into real outcomes

For decades, the world's most advanced and sophisticated enterprises have worked with Honeywell to help them transform challenges into opportunities – and we can help you too.

When you integrate the people and operations you depend on with the data that surrounds you, your building is more than just a place: It can become an engine to drive your growth.

Honeywell Forge makes this possible with an Integrated Operations suite that can help you streamline and automate complex functions; improve efficiency, security and building health; and gain the analytical insights to deliver savings throughout your enterprise.

Honeywell

INTEGRATED OPERATIONS

DRIVE REAL OUTCOMES

Enterprise Buildings Integrator (EBI) is the smart-building “operating system” of choice for critical facilities and complex operations, from airports and nuclear-power stations to enterprises that cross continents, and some of the world’s most iconic buildings. With one intelligent solution, you can more effectively monitor, optimize, and automate essential functions, such as building health and energy management, security, access, and life safety.

Automate the details with Enterprise Buildings Integrator

EBI is also an open IoT platform for integrating virtually any third-party systems and equipment, cloud connectivity, mobile applications, and more. It’s all unified into one powerful interface based on an innovative zoomable map of your site, which promotes faster, more intuitive comprehension and interaction. Plus with native support for DVM and CCS, you can drive smarter outcomes throughout your operations.

STEP BACK

Get a clearer view of your operations with Digital Video Manager

Operational disruptions can be costly, and the quality of an incident response can have a lasting impact on your reputation – positive or negative. That’s why fast, effective outcomes matter, whether you’re tracking a person of interest, investigating an incident, or monitoring safety and protecting people.

Digital Video Manager (DVM) gives you smart surveillance built on a resilient platform that’s designed to integrate new technologies, such as the latest IP cameras, video analytics, and encryption – so you can more effectively maintain vigilance and mitigate risk while enhancing the efficiency, integrity, and above all, the safety of your operations.

HANDS ON

Take control of incidents with Command and Control Suite

Command and Control Suite (CCS) is a suite of applications for diverse screen interfaces designed to facilitate enterprise operations from virtually anywhere.

CCS incorporates the full power of EBI and DVM, then adds an additional layer of functionality with powerful visualization and incident management. Intuitive map-based navigation makes critical information easier to access, and Incident Workflows support standard operating procedures (SOPs) for more efficient responses.
