

# MAXPRO® VMS & NVR

## 32- Bit Operating System-Discontinuation Notice

### Introduction

**This documents is a notice to all the existing customers of MAXPRO® VMS and NVR and it is applicable to all the variants of MAXPRO® product client & server softwares.**

*If you have any queries regarding this notification/document, please contact Honeywell Customer support. See the back cover for the contact information in respective regions.*

### End of Support for 32-bit Operating System

Honeywell ends the support for 32- bit operating system for MAXPRO® VMS/NVR Client and Server software installations.

### MAXPRO® Software Version

This discontinue notification is applicable from the following MAXPRO® VMS /NVR Client and Server versions:

- MAXPRO® VMS R600
- MAXPRO® NVR 6.0

### Recommendation to End User

A 32-bit Operating System, for example, has more limitations—the standout being it can only utilize 4GB of RAM. Installing more RAM on a system with a 32-bit Operating System doesn't have much impact on performance. But upgrade that system with excess RAM to the 64-bit version of Windows and you'll notice the difference.

64-bit processor is more capable than a 32-bit processor, because it can handle more data at once. A 64-bit processor is capable of storing more computational values, including memory addresses, which means it's able to access over four billion times the physical memory of a 32-bit processor.

Major Central Processing Unit (CPU) manufacturers have introduced 64-bit processors since 2000. Microsoft Windows 7 was released in 2009, since then more 64-bit Operating Systems than 32-bit editions have been installed on laptop and desktop computers.

Hence it is recommended to the customers to install 64 bit Operating System and use MAXPRO® VMS /NVR Client and Server applications.
