

# **THE NEW SAFETY STANDARD: COMPLETE CONNECTIVITY WITH CLSS**

Experience a safer building with  
a more reliable connection

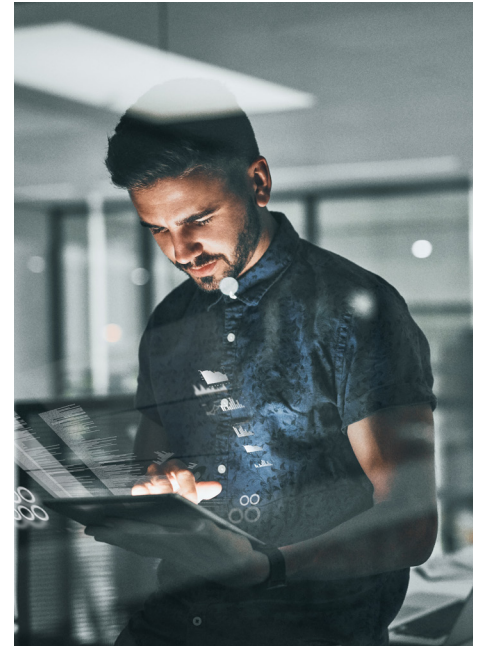

**Honeywell**

A building's safety and security is dependent upon having the most up-to-date information possible. Due to slow, outdated POTS lines or the need to be physically in front of the fire panel, we often aren't addressing life safety issues and emergencies until it's too late.

That's why Honeywell is on a mission to set a new standard in life safety by sharing information in real-time, delivering accurate system data, increasing visibility, and improving response times for technicians and first responders.

What if there was a way to feel more connected and better protected?

Connected Life Safety Services (CLSS) is an end-to-end platform that leverages the power of cloud-connected technology for maximum system uptime and a more reliable connection to the central station.

## 6 WAYS CLSS PLACES CONNECTIVITY AT THE HEART OF LIFE SAFETY:

### A Signal You Can Trust

With the deregulation of legacy telephone lines, connection to a CLSS-enabled 5G communicator ensures a more secure line and eliminates service calls and other expenses for communication issues.

### Quick and Accurate Alarm Transmission

Faster and more accurate alarm event communication with the speed and reliability of today's 5G networks versus traditional telephone lines.

### Compliance On-Hand

Store digital inspection reports in the secure cloud for immediate retrieval for AHJ or insurance company review. Organize multiple buildings' compliance records in a single convenient location.

### Complete Line-of-Site Monitoring

Remote access to the fire alarm panel via the CLSS app allows you to see what's going on at your facility anytime, anywhere. Say goodbye to unnecessary trips to each building for unknown issues - with CLSS, you can receive alerts when events are generated, view asset information and system status across multiple sites, and more.

### Less Downtime and Disruption

This same system visibility allows your alarm service provider to know exactly what the issue is before arriving on-site, ensuring they have what they need to reduce disruption and increase first-time fix rates.

### Remain on the Leading Edge of Technology

By adopting CLSS, you secure a front-row seat to the continued development and future enhancements of this innovative technology suite.
