by Honeywell

Keeping Healthcare Facilities Safe and Secure

Hospitals, clinics, urgent care centers and long-term care facilities face unique challenges that demand unwavering attention to safety and security. With 24/7 operations, the presence of vulnerable populations, and the need for uninterrupted services, facility managers must ensure the highest standards of protection while maintaining uptime and business continuity. Balancing the two is no easy task, but with NOTIFIER by Honeywell's new connected systems, it can be.

NOTIFIER's new line of integrated fire and life safety solutions deliver real-time visibility, proof of compliance, and unmatched scalability – enabling seamless protection of your patients, staff, and property.

Less Disruptive Testing with NOTIFIER Self-Test Series of Detectors

Healthcare facilities have secure rooms that are off-limits to unauthorized individuals, ensuring the safety and privacy of patients and sensitive operations. The NOTIFIER Self-Test series of detectors are the first UL-approved detectors that can be tested automatically, offering a state-of-the-art sensing technology that allows fire safety professionals to test and inspect the detector digitally, rather than the traditional process using an invasive smoke pole.

This means technicians don't need access to restricted or difficult to reach areas like ICUs and operating rooms –they can connect to the detector via Bluetooth and conduct a visual and functional test at the touch of a button. The test is automatically recorded in the Connected Life Safety Services (CLSS) Compliance Manager app, providing you digital proof of compliance at your fingertips.

Remote System Visibility with Connected Life Safety Services (CLSS)

Honeywell's Connected Life Safety Services (CLSS) is a cloud platform that revolutionizes fire safety management by providing real-time monitoring, predictive maintenance, and streamlined compliance reporting from the desktop or mobile app, allowing healthcare facilities to enhance their safety protocols without adding complexity.

With CLSS, Healthcare facilities teams have always-on visibility into their systems, at one site or across multiple. In one single platform, you have access to device details, system status, compliance documentation, scheduled maintenance visits, real-time alerts that allow for immediate action, and more.

Scalability and Control with the NOTIFIER INSPIRE series

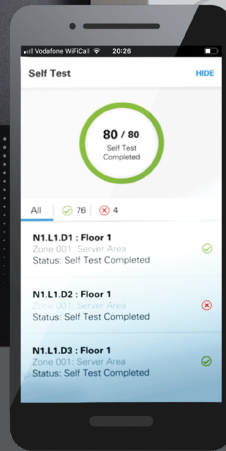

The NOTIFIER INSPIRE fire control system provides a robust solution for managing fire safety across healthcare campuses. With advanced integration capabilities, these systems ensure coordinated responses, protecting lives and property efficiently.

NOTIFIER INSPIRE provides more control for facilities teams by centralizing fire safety management, enabling scalability for facilities of all sizes, and providing a user-friendly interface that simplifies staff training and operation. The system requires less equipment, which in turn impacts the amount of maintenance, replacement parts, and overall inventory management required.

What does this mean for you? Less disruption. Better care.

Honeywell is Your Partner in Healthcare Safety

These integrated solutions work seamlessly together to meet the unique needs of the healthcare industry. Together, Self-Test series of detectors, CLSS cloud platform, and the NOTIFIER INSPIRE series provide a reliable, efficient and comprehensive fire safety system, ensuring the protection of patients, staff and property.

NOTIFIER INSPIRE

Fully networkable life safety system that unlocks access to NOTIFIER's self-testing detection technology.

NOTIFIER Self-Test

The first UL-approved detectors that can be tested automatically.

Honeywell CLSS

Cloud platform that digitizes fire safety management
