

# Life Safety Systems that Do More

In 2021, Honeywell conducted a study\* to uncover the challenges, priorities, and assessments of U.S. facility managers in healthcare, data centers, education, and premium commercial real estate. When it comes to fire and life safety, the results of the study show that there is a need for systems that drive faster responses, enable real-time visibility, reduce building disruptions, and communicate information quickly and accurately. **NOTIFIER's new connected systems deliver just that.**

**91%**  
of facility managers

**say that life safety systems that drive faster responses are important upgrades for attracting stakeholders and occupants.**

With a NOTIFIER INSPIRE fire alarm panel and CLSS software, stakeholders and technicians can view and identify problems before they arrive on site, improving response readiness and decreasing troubleshooting and repair times.

**70%**  
of facility managers

**say they are concerned about communicating important information from facility managers to stakeholders.**

Honeywell's CLSS software pulls inspection and reporting data electronically, ensuring you have access to digital compliance reports anytime, anywhere.

**91%**  
of facility managers

**say that upgrades that limit disruptions throughout the day due to testing and maintenance are important for attracting stakeholders and occupants.**

NOTIFIER's self-testing detectors digitize the test and inspection process, removing the need for a manual walk test with multiple technicians. Instead, a single technician can test each detector using the CLSS mobile app, turning a process that typically takes days and weeks into hours and minutes.

**ONLY 35%**  
of facility managers

**currently have software that allows for better access and insight into fire systems**

Together, NOTIFIER INSPIRE™, NOTIFIER Self-Test, and CLSS remove the guesswork of what is happening at the facility with a 24/7 view of maintenance schedules, device age and condition, inspection reports, and real-time system status.
