

# A BUSINESS CASE STUDY

## FOR HEALTHCARE

In order to enhance services provided to their outlying clinics and departments, Guy's and St Thomas' NHS Foundation Trust invested in a Building Energy Management System (BEMS) from Trend Control Systems.

### THE CHALLENGE

With no cohesive central management, a lack of on site facilities team and no visibility to the BMS resulted in significant visits to and from site to manage the systems.

### THE SOLUTION

Through choosing Trend and its Trend Supervisor, the hospital was provided with a graphical, real-time user interface that enables users to monitor specific activities and make any necessary changes.

### THE OUTCOME

Greater visibility means reduced fault calls, more proactive maintenance and therefore reduced remedial costs and a significant reduction in energy consumption.

## Benefits

- Maximised Uptime
- Reduced Maintenance Costs
- Energy Reduction

**PUTTING PATIENTS AND STAFF FIRST IN YOUR HEALTHCARE FACILITY**
