

BUSINESS SNAPSHOT FOR RETAIL

NETHERLANDS

BENEFITS

Trend's IQX is an easy-to-implement, cost-effective solution that helps provide heating and cooling to various climate systems over large spaces.

Westfield Mall of the Netherlands is the largest shopping destination in the Netherlands, accommodating 280 shops over 117,000m² of floor space. TTK Techniek implemented a prefabricated “plug & play” solution with TREND's IQX ready for the opening of this new shopping centre.

THE CHALLENGE

In Leidschendam (NL) Unibail-Rodamco-Westfield acquired a 117,000m² shopping centre called Westfield Mall of the Netherlands which accommodates 280 shops. Before 18 March 2021, all shops needed to be ready for the opening by King Willem-Alexander. Due to the tight schedules, an easy-to-implement solution was needed.

THE SOLUTION

Together with the installer TTK Techniek, they developed and provided a prefabricated “plug & play” skid solution utilised with heat pumps and Trend's IQX hardware, software and sensors. This provided heating and cooling to various climate systems within the various shops in the Mall of the Netherlands. All shops benefited, including brands such as Lego, Urban Outfitters, Guess and Levi's.

THE OUTCOME

TTK Techniek provided, within tight deadlines, a cost-effective prefabricated “plug & play” which is an easy-to-use standardised solution to the installer. This resulted in TTK Techniek being able to deliver on time before the grand opening. The Trend solution incorporating IQX also ensures a comfortable, optimised environment for everyone visiting and working in the Mall.
