

# Connect, Control, Collaborate

Command and Control Suite Release 200.2

Command Console

# Command Better Business Outcomes

Mitigate risk. Maintain continuity. Improve efficiency. From the control room to the boardroom and on the go, one platform gives you the insight, agility, and automation to better coordinate nearly every aspect of complex facilities, even in an emergency: The Honeywell Command and Control Suite.

## Rapid Response Requires Intuitive Control

The **Command and Control Suite (CCS)** helps streamline complex operations by better coordinating your systems, teams, and devices, even across distributed facilities.

CCS is a suite of applications for diverse interfaces (desktops, laptops, tablets, wall-mounted touchscreens, as well as web browsers) designed to facilitate enterprise operations from virtually anywhere.

An intuitive map-based interface makes critical information easier to access quickly, and with Incident Workflows, you can use standard operating procedures (SOPs) to efficiently respond to a variety of situations.

**CCS is an open system** that supports a full range of industry-standard open protocols and web-services interfaces.

It can integrate with other facility systems such as security, life safety, and building management, including Enterprise Buildings Integrator (EBI) from Honeywell. CCS works with systems and equipment from numerous suppliers, as well as business and operational systems in a variety of industries.

Microsoft Surface® Pro

## CCS Release 200.2

### The Command and Control Suite Expands

#### Command Station

##### Desktop Use and Mobile Operations

Get an overview of events on site, virtually anytime, anywhere. Designed to help you coordinate maintenance, deploy staff, and respond to incidents, and to give on-site technicians system access.

Installs on Windows-based tablets, laptops, and single-monitor desktops, or access via web browser on virtually any device.

Designed For:

**Department Managers**  
**Facility Managers**  
**Facility Personnel**  
**Lab Technicians**  
**Operations Directors**  
**Service Technicians**

#### Command Console

##### 24/7 Security and Control Room Operations

Improve situational awareness across facilities. Prioritize and manage incident responses with SOPs. Access integrated systems with detailed insight. Integrate Digital Video Manager and video walls to further enhance security.

Optimized for a range of multi-window, multi-monitor configurations.

Designed For:

**Engineers**  
**Facility Operators**  
**Security Operators**

#### Command Wall

##### Collaboration and Incident Response

More effectively coordinate responses, such as evacuations. Simplify the reprioritization and redirection of critical tasks, as well as management of daily tasks.

For 60- to 90-inch touchscreen displays.

Designed For:

**Emergency Personnel**  
**Engineering Teams**  
**Executive Management**  
**First Response Teams**

# Control Operations with Coordinated Responses

## Mitigate Risk

During an incident, the right decision can be the difference between minor downtime and major disruption. CCS helps you keep disruption to a minimum, even in a major incident.

- **Incident Workflow** incorporates SOPs to help you improve the quality and consistency of responses and to reduce risk. CCS R200.2 further enhances timeline and map integration.
- **Digital Video Manager** provides a flexible view of events, even in real-time, for more effective response and analysis.
- Access via mobile devices enables monitoring beyond the control room for a more agile, informed response.

## Increase Productivity

Map-based navigation displays information only as needed for detailed yet intuitive navigation, and supports touch control for faster use and training, and cross-skilled teams.

- The ability to view and manage numerous facility systems in one place enhances the value of facility-wide integration.
- **Enterprise Dashboards** give you insights into your building's energy use and efficiency to help you optimize performance and reduce costs.
- **CCS R200.2** provides faster, more intuitive navigation and control of equipment directly from smart objects on the map. Control cameras, doors, HVAC set points, and more.

## Minimize Downtime

Disruptions, like a breakdown or a breach, can be costly. CCS helps you increase the resiliency of your operations.

- Integrating cameras, fire sensors, HVAC, and other systems organizes data in one place for more efficient investigation and diagnosis.
- Make informed decisions more quickly using security video, alarm management, and Enterprise Dashboards.
- Smart-map elements populate subsystems with real-time details for faster, more accurate navigation and insights.
- CCS virtualization and redundancy options help improve system uptime and simplify management to support overall business continuity.

## Build Confidence

Instill confidence in your teams and stakeholders: CCS helps you demonstrate greater safety, security, and readiness.

- Improve compliance: Preserve each step your operators take with digital recordings of the Incident Workflow process.
- Accelerate post-incident analysis with automated reporting.
- CCS provides instinctive user experiences designed for the needs of your teams – not the limits of devices or systems.
- **CCS R200.2** offers more install options, from a "thin client" to various server options, helping tailor your system to your needs for installation costs, data security, and backups.
